                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequences AAA31040-A32093 represent novel plant microsatellite sequences and associated flanking species. The sequences comprise a central core repeat sequence, especially selected from the sequences AAA32094-A32096 with left and right flanking sequences. The polynucleotide sequences can be used in the detection of DNA polymorphisms, in genome mapping, in physical mapping, in positional cloning of genes, in variety identification and in evaluation of genetic variability within and between plant tissues, populations, cultivars, species and species groups. They may also be used to design hybridization probes for oligonucleotide fingerprinting and dlibrary screening and to design primers for microsatellite-primed PCR. Microsatellite markers are useful to locate specific economically useful genes in plant genomes.
                                                                                                                  09-OCT-1998;
                                                                                                                                                               08-OCT-1999;
                                                                                                                                                                                                                                                               WO200022110-A2
                                                               (HARD )
                                                                                                                                                                                                                  20-APR-2000.
                                                                                                                                                                                                                                                                                                               Herpes

The F-box proteins are a family of ubiquitin ligases (SCF ubiquitin Cligases) which can be used for the targetted degradation is achieved by expressing the ubiquitin ligase in a cell linked to the interaction domain of the target polypeptide and thereby recruiting the target polypeptide concerning and thereby recruiting the target polypeptide to the ubiquitin ligase. Such methods are useful for decreasing or increasing the level of a target polypeptide and for creating and expressing a destabilized polypeptide which is subjected to SCF mediated proteolysis. Degrading any desired protein in a cell is useful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and conceptoteins, Huntington's disease, other proliferative disorders and conceptoteins. The method provides a quick and easy also include an concepton development in the method provides and the development in the method provides disorders and concepton development in the concepton development development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Targeting degradation of polypeptide useful for treating cancer and other proliferative disorders, involves conjugating polypeptide with ubiquitin protein ligase or inhibiting ubiquitination using organic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  P-PSDB;

Pseudomonas dimin
Hordeum vulgare.
                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents an optimised nucleotide sequence encoding an organophosphorus hydrolase (OPH) protein atached to an optimised sequence barley alpha amylase sequence. The products and constructs can be used for environmental and in situ detoxification comprising exposing contaminated material to OPH, or detoxification of organophosphorus neurotoxin contaminated soil. The products can also be used as agricultural and domestic pesticides, including insecticides, fungicides and herbicides or chemical warfare agents. The OPH can also be used to hydrolyze other chemical agents or compound containing P-O, p-S, P-CN and P-S bonds. The products can be used to produce transgenic plants which are capable of expressing OPH at levels greater than that of the typical 10-15mg/l of E. coli or baculovirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS

The method comprises introducing into the plant nucleotide sequences encoding the enzyme and exposing the enzyme to the metal cofactor. The method is useful for improving recovery of active enzyme which requires a transitional metal cofactor for activity, preferably for improving recovery of active laccase which requires copper for activity. The method can be used for improving recovery of active organophosphate hydrolase (OPH, E.C. 3.1.8.1) which requires zinc, nickel, cobalt or manganese for activity, where the method further comprises adding bicarbonate ion salt. The present sequence encodes OPH isolated from Flavobacterium sp., which is used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Organophosphate hydrolase; enzyme; dimeric metaloenzyme; metal cofactor; gene; plant; E.C. 3.1.8.1; zinc; cobalt;

            This sequence represents DNA encoding a Herpes simplex virus type 1 (CC (HSV-1) VP22 tegument protein, which is involved in transcellular CC localisation. VP22 can be fused to cytochrome P450 reductase (P450R) CC (AAY42288). This enables the fusion protein to be delivered to reighbouring cells where it is then transported to the nucleus. Many CC where P450R normally functions. P450R or its derivatives can be used to growing is useful where the active form via reduction. Administration of a crivate prodrugs to their active form via reduction. Administration of a growing is useful where the active drug may be metabolised before it creaches its site of action or where the active drug is cytocoxic, e.g., anticancer drugs. Targetted delivery of such prodrug activators allows a reduction in dose of the prodrug, and thus of systemic side-effects. CC patchiam dose of the prodrug, and thus of systemic side-effects and muscular dystrophy, but may also be used to treat many other conditions associated with hypoxia, ischaemia or hypoglycemia, or to deliver antibiotics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

The prodrug activating agent or vectors that express them, are specifically used to treat tumors, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g. cerebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, hypoglycemia or ischemia, or to deliver antibiotics, antiviral agents, analgesics, ancesthetics, anti-inflammator-ies antibiotics anteriacidation and algents and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 anesthetics, anti-inflammatories; antineoplastic agents and diagnostic agents. LD optimize activity of PAD, eg. by delivering it to selected locations or by delivering it to neighboring cells (bystander effect), and allow a reduction in dose of prodrug, and thus of systemic side effects. Nucleic acids encoding the agent may be expressed selectively in hypoxic cells. The present sequence represents a DNA encoding the HSV-1 tegument protein VP22 (complement sequence 106391 to 105486 of genBank sequence X14112). This is used in the construction of a fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Stratford IJ,

Disclosure; Page 31; 123pp; English.

The HSV-1 VP22 polypeptide can be fused to a retinoblastoma (Rb) contrivator protein sequence to aid targeting and internalization. The invention concerns methods and reagents for extending the life-span, ce g. the number of mitotic divisions, of a cell. The method relies on cactivation of a telomerase activity and inhibition of one or both of a cRb/INK4 pathway or a p53 pathway. Phosphorylation of Rb by CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the CV cyclin-dependent kinases, cdk4 and cdk6, releases the cells and cyclin-dependent and of growth and differentiation. Long lived (immortal) ceris of use in the production of normal or genetically engineered products.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
The invention relates to novel inhibitors of cyclin-dependent kinases (CDKs), particularly (CDK/cyclin complexes. It provides a recombinant transfection system (A) that comprises: (i) first gene construct comprising a sequence encoding an inhibitory polypeptide containing at least one CDK-binding motif for binding and inhibiting activity of a CDK, linked to a transcription regulator functional in eukaryotic cells, (ii) second gene construct comprising a sequence encoding a polypeptide that promotes endothelialisation, and (iii) a gene delivery composition for delivering the GCs to a cell for transfection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acids encoding a fusion protein (FP) containing: (i) a therapeutic polypeptide sequence (TP) from an intracellular protein that alters a cellular process when FP enters the cell, and (ii) a transcellular polypeptide sequence (TCP) that promotes transcytosis of FP. The FP consists of at least one CDK-binding motif and a TCP. See AAX26220 for detailed uses of the recombinant transfection system. The CKI polypeptides are engineered to include any of the peptides shown in AAW95097-100 encoded by the DNA sequences AAX26225-228.

The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method of identifying the co-activator domain of specific synthetic activators, involving contacting the target domain of a selected transcription factor with a peptide display library, and identifying those sequences which bind to the target domain. In particular, those which bind to the KIX domain of p300/CBP are useful. The peptides can be used in the treatment of diseases related to aberrant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying co-activator domain specific transcriptional activators contacting a target domain of a selected transcription factor with epeptide display library, where the identified binding peptides are useful for reducing hyperglycemia -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure;

(C) have cytostatic, nootropic and antiproliferative activity. Also described is a method for the treatment of a disease or condition where affected cells have a defective protein, comprising administering (C) to promote degradation of the target protein in cells by ubiquitin dependent proteolysis. (C) can also be used for modulating the proliferation, growth and/or differentiation of cells. (C) can be used to modulate biquitin dependent proteolysis or cell proliferation, growth and or differentiation of cells. (C) is useful in the treatment of cancers and neurodegenerative disorders as well as spinal degeneration. The present sequence encodes the HSV-1 VP22 protein which is given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Cdc4 Phospho Design motif that targets molecules for ubiquitin dependent proteolysis, is useful for the modulation of cell proliferation i.e. cancer treatment -
                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 912 BP; 149 A; 354 C; 287 G; 122 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 30; 83pp; English.

VP22 was used in the preparation of a novernantiviral agent, which inhibits the maturation and/or replication of HSV by disrupting association between VP22 and VP16 and/or gB. The agent can be used to treat, e.g. cold sores, genital herpes, which can be used to treat, e.g. cold sores, genital herpes,

The invention also relates to the use of the protein (II) and its encoding DNA (I) for immunizing an individual against diseases, in particular against infection-induced auto-immune and tumor disease. This sequence represents a DNA fragment which encodes the fusion construct vP22-E7 which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying an immunization agent comprising cell import and/or export signal sequences and an antigen for immunizing against infection-induced auto-immune and tumor disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fusion protein; VP22; E7; cell import signal; cell export signal; antigen; immunization; infection-induced auto-immune disease; tumor disease; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAH21456 standard;

The present invention relates to a new nucleic acid molecule that CC encodes a fusion polypeptide. The fusion protein comprises a first polypeptide comprising at least one intercellular transport polypeptide CC and a second polypeptide comprising at least one antigenic polypeptide CC are peptide. The invention also describes an optional linker peptide CC linking the first and second polypeptide. The nucleic acid is useful as CC a vaccine for enhancing immune responses, primarily cytotoxic T lymphocyte responses to specific antigens such as tumour or viral CC lymphocyte responses to specific antigens such as tumour or viral CC useful as a therappeutic vaccine for cancer and for major chronic viral CC infections, as well as in the treatment of veterinary herpesvirus infections, including equine or bovine herpesvirus, Marek's disease virus CC infections, including equine or bovine herpesvirus, Marek's disease virus CC infections. The present nucleic acid sequence encodes the pcDNA3-VP22/E7 creation of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 2.8%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nucleic
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

Sequence 5, Application US/08680506C

Patent No. 6008013

GENERAL INFORMATION:
APPLICANT: REYNOLDS, PAUL R.

TITLE OF INVENTION: CHONDROCYTE PROTEINS
FILE REFERENCE: 176/60091

CURRENT APPLICATION NUMBER: US/08/680,506C

CURRENT FILING DATE: 1996-07-08

EARLIER APPLICATION NUMBER: 60/021,672

EARLIER FILING DATE: 1966-07-05

NUMBER: OF SEQ ID NOS: 18

SOPTMARE: Patentin Ver. 2.0

EEQ ID NO 5

LENGTH: 954

TYPE: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
